

Electronic Warfare Consultancy Company uses ESET to protect key data

“We can’t actually remember the last time we had a virus on a client system utilising ESET, it works beautifully!” - Matthew O’Grady, Erud I.T Ltd.

CUSTOMER

Erud I.T. Ltd (EIL) are a well-established, professional IT support company who are ready to deliver IT services, IT solutions and computer support to a variety of businesses throughout the UK, specialising in the SME market and expanding businesses.

EIL covers all aspects of computer support for businesses, from desktops, laptops, tablets, workstations and servers and everything in between. They focus on delivering a high quality service, designed to meet customer needs.

Electronic Warfare Solutions (EWS) is a fully independent and equipment agnostic consultancy that provides specialist assistance to UK and international Government Agencies, the defense industry and those involved in counter terrorism.

EWS have the ability to focus their expertise into Government Agencies who are seeking to develop a new or expand an existing capability. They also use their expertise to aid a company’s program, tender process or equipment development whilst protecting key data which is fundamental to their organisation.

CHALLENGE

EIL were looking for an antivirus supplier that offered centralised administration, single licensing codes and a company where they didn’t have to wait for boxed product.

Matthew O’Grady, EIL, stated “when choosing our antivirus we were looking for products that would not cause our clients, or us, any undue issues, that do the job effectively without causing issues of its own”.

Data security is essential for EWS therefore they were looking for a reliable antivirus vendor, offering the highest level of data protection.

EWS review their antivirus vendor annually, and always search for a dependable product. Troy Phillips, EWS commented “ESET was recommended to us both by our IT provider and by our Technical Director who is responsible for Information Assurance”.

SOLUTION

EIL has used ESET since their company formed and they have not considered switching to an alternative vendor.

Matthew O’Grady stated “we have been using ESET for years. It provides us and our clients with fast, effective protection for a multitude of systems with centralised licensing, centralised administration, minimal system impact, and most of all we can’t actually remember the last time we had a virus on a client system utilising ESET, it works beautifully!

99% of our clients have never had a virus or any major issues with their antivirus system – that is a pretty good success rate!”

After hearing strong recommendations on ESET’s products and undertaking independent research EWS chose to use ESET.

Troy Phillips, EWS explains “our company requires the highest levels of Information Assurance. As such, we need an antivirus that meets the most stringent requirements for an organisation like ours that deals with sensitive information. ESET meets those requirements and gives us confidence that our information is protected from malicious attacks”.

A high performing security solution built on an established track record in independent testing. Advanced technologies such as cloud-powered scanning and remote administration capability make it the right fit for any size company.

System Requirements:

Windows® 7, Vista, XP, 2000, NT 4.0 (SP6),
Windows Server 2000, 2003, 2008, 2008 R2

Processor Architecture:

Intel®/AMD® x86/x64

Antivirus and Antispyware

Eliminates all forms of threats, including viruses, rootkits, worms and spyware, keeping your network protected online and off. Optional cloud-powered scanning utilises our reputation database for increased scanning speed and minimal false positives.

NEW Host-based Intrusion Prevention System (HIPS)

Provides tampering protection and protects the system registry, processes, applications and files from unauthorised modification. You can customise the behaviour of the system down to every last detail and detect even unknown threats based on suspicious behaviour.

NEW Device Control

Lets you block unauthorised media and devices based on preset rules and parameters. Set access permissions (read/write, read, block) for individual media, devices, users and groups.

Auto-Scan of Removable Media

Automatically scans USBs, CDs, and DVDs for threats upon insertion to eliminate autorun and other removable risks. Choose from these scanning options: start automatically/notify (prompt user)/do not scan.

Cross-platform Protection

Exchange files and email attachments among Windows, Mac and Linux endpoints with confidence that malware targeting any of these platforms will be automatically detected and eliminated.
Prevent Macs turning into carriers of malware in the company network.

Low System Demands

Leaves more system resources for programs you use daily. Our software also runs smoothly on older hardware, saving your time and costs of having to upgrade your endpoints.

NEW Multiple Log Formats

Save logs in common formats - CSV, plain text, or Windows event log for immediate analysis or harvesting. Take advantage of data being readable by 3rd party SIEM tools; RSA enVision is supported directly via a plug-in.

NEW Update Rollback

Revert virus signature and module updates to a known good state in case of encountering system incompatibilities. Opt to freeze updates temporarily or until manually changed.
